## **PARKING SENSORS**

---

### **REVERSE PARKING SENSORS**

Reverse parking sensors act as an aid whilst reversing.

They use ultra sonic technology to detect objects behind the vehicle.

A variable beep tone is heard when the vehicle gets closer to the object.

The sensors are painted to match the colour of the vehicle. (where applicable)

### **FRONT PARKING SENSORS**

Front parking sensors act as an aid whilst parking.

They use ultra sonic technology to detect objects in front of the vehicle.

A visual indication is given on a display unit which mounts close to the windscreen.

The sensors are painted to match the colour of the vehicle. (where applicable)

### **METAL BAR REAR PARKING SENSORS**

These sensors come in a rubber package.

Only rubber sensors should be used in metal bars for best operation.

They use ultra sonic technology to detect objects behind the vehicle.

A variable beep tone is heard when the vehicle gets closer to the object.

The sensors only come in black rubber and can't be painted.
